

ROHAN NAYAK

FULL STACK SOFTWARE ENGINEER

Java | Spring Boot | React | Angular | Node.js | TypeScript | AWS
India | +91 9776311909 | rohandarkbull@gmail.com

PROFESSIONAL SUMMARY

Full-stack software engineer with 5 years of experience designing, developing, deploying, and supporting enterprise applications across web, backend, database, and Linux environments. Strong hands-on background in Java, Spring Boot, REST APIs, Angular, Next.js, PostgreSQL, and MySQL, with working experience in React, TypeScript, Node.js, Express.js, Vite, Tailwind CSS, AWS, and API Gateway. Experienced in requirement analysis, solution design, secure integrations, production troubleshooting, release support, documentation, and client coordination. Comfortable owning features from business discussion through implementation and production stabilization.

CORE TECHNICAL SKILLS

Primary Backend	Java, Spring Boot, RESTful APIs, validations, error handling, secure integration patterns
Web Frontend	Angular, React, React Hooks, Redux, Context API, Next.js, TypeScript, JavaScript, Vite, Tailwind CSS, HTML5, CSS3
Additional Backend	Node.js, Express.js, GraphQL fundamentals, API contract design and third-party integrations
Data	PostgreSQL, MySQL, stored procedures/functions, schema design, query optimization, Redis; working exposure to MongoDB and DynamoDB
Cloud & Delivery	AWS, Amazon S3, API Gateway, Git-based workflows, Linux, Nginx, systemd; basic Docker knowledge
Mobile & Quality	React Native fundamentals, Android/iOS release workflow knowledge, Cypress fundamentals, regression testing, RCA
Collaboration	Client handling, requirement gathering, solution design, UAT support, Jira, Postman, technical documentation, mentoring

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Nirmalya Labs | 2021 - Present

- Work directly with clients and internal stakeholders to understand business processes, define requirements, evaluate technical feasibility, and convert needs into implementation plans and user flows.
- Design and develop enterprise applications using Java, Spring Boot, Angular, Next.js, TypeScript, PostgreSQL, and MySQL across workflow-heavy business modules.
- Build and maintain RESTful APIs with consistent request/response contracts, validation, authorization-aware integration patterns, exception handling, and clear error responses.
- Develop reusable frontend components, responsive screens, forms, dashboards, and data-driven workflows with attention to maintainability and cross-browser behavior.
- Implement database logic through PostgreSQL/MySQL procedures and functions; analyze schemas, indexes, query behavior, and stored-procedure output for correctness and performance.
- Support end-to-end delivery including integration, UAT, deployment preparation, release validation, production rollout, and post-release stabilization.
- Troubleshoot issues across UI, API, database, configuration, and Linux service layers by reviewing logs, reproducing failures, identifying root causes, and validating fixes.
- Manage production services behind Nginx and systemd, support environment configuration, and coordinate low-downtime fixes during urgent incidents.
- Contribute to implementation reviews, technical documentation, deployment notes, RCA summaries, and knowledge sharing with team members.
- Guide junior developers on API behavior, database logic, debugging approaches, and delivery standards while independently owning complex modules and client discussions.

SELECTED PROJECT EXPERIENCE

Enterprise ERP / Business Suite | *Java, Spring Boot, Angular, PostgreSQL/MySQL*

- Developed workflow-driven modules covering forms, validations, approvals, data listings, reports, and API-backed business processes.
- Created reusable UI patterns and standardized API response/error structures to improve consistency across modules.
- Supported client walkthroughs, requirement clarification, UAT fixes, deployments, and production issue resolution.

LMS, Examination and Mock-Test Platform | *Next.js, TypeScript, Spring Boot, MySQL*

- Implemented the examination lifecycle including start/resume, eligibility checks, question retrieval, answer submission, final submission, results, and detailed answer review.
- Integrated frontend and API workflows with stored-procedure orchestration and handled procedure-driven JSON compatibility issues.
- Investigated production defects across TypeScript pages, REST integrations, and database outputs and delivered verified fixes.

External API and E-Invoice Integration | *Spring Boot, REST APIs, Web UI, SQL*

- Built secure external-service integrations with session/token handling, request validation, dynamic item management, and robust response/error processing.
- Improved modularity of invoice workflows and reduced avoidable submission errors through validation and cleaner UI flows.
- Documented integration behavior and supported testing, issue analysis, and release activities.

Web, Mobile and Cloud Technology Exposure | *React, Node.js, AWS, React Native*

- Working experience with React component development, Hooks, Redux, Context API, Vite, Tailwind CSS, Node.js, and Express.js for modern web application patterns.
- Practical knowledge of AWS and Amazon S3, with strong understanding of API Gateway; working exposure to DynamoDB and cloud-hosted application support.
- Basic React Native and BLE-device integration exposure, with good knowledge of Android/iOS mobile release workflows.
- Additional working knowledge includes Redis, plus foundational exposure to MongoDB, Docker, GraphQL, and Cypress.

Production Deployments and Stability | *Linux, Nginx, systemd, Git*

- Configured and supported application environments, reverse-proxy routing, service management, log analysis, and production process monitoring.
- Handled urgent incidents across application, API, database, and infrastructure layers while minimizing service disruption.
- Performed regression checks and post-deployment validation to confirm stability after fixes and releases.

ENGINEERING PRACTICES

- Full SDLC ownership: requirement analysis, design, implementation, integration, testing, deployment, support, and continuous improvement.
- API engineering: REST principles, version-aware contracts, authentication/authorization concepts, validation, error handling, and third-party integrations.
- Quality and support: peer review participation, regression verification, production log analysis, RCA, issue prioritization, and corrective action.
- Data engineering: relational schema understanding, stored procedures/functions, efficient SQL, index awareness, query analysis, and database integration.
- Communication: technical documentation, API/deployment notes, stakeholder updates, implementation trade-offs, and team knowledge sharing.

EDUCATION

B.Tech in Information Technology - Orissa Engineering College, Bhubaneswar
